

NAT64CHECK

Version 2

BACKGROUND

- Fast growing number of IPv6-only networks with NAT64 & DNS64
 - Works fine most of the time
- Breaks when web hosters do stupid things
 - Bad DNS records
 - Hard-coded IPv4 addresses in URLs

BACKGROUND

- Bad AAAA records in DNS
 - ::
 - ::1
 - ::ffff:[IPv4_addr]
 - fe80::[some_value]
 - 64:ff9b::[some_value]
 - 2001:DB8::[some_value]

PROJECT HISTORY

- **Version 0:**
 - Jan wrote some Bash scripts
- **Version 1:**
 - Sander wrote a Python/Django application
 - Corinne designed a web interface

textfiles.com

On the face of things, we seem to be merely talking about text-based files, containing only the letters of the English Alphabet (and the occasional punctuation mark).

On deeper inspection, of course, this isn't quite the case. What this site offers is a glimpse into the history of writers and artists bound by the 118 characters that the American Standard Code for Information Interchange (ASCII) allowed them. The focus is on mid-1980's textfiles and the world as it was then, but even these files are sometimes reloaded 1990's and 1990's works, and echoes of this culture exist to this day.

Where are the files? Who are you? Why does this matter?
What was it like? How can I help?

THE UGLY
foxnews.com

VERSION 1 FLAWS

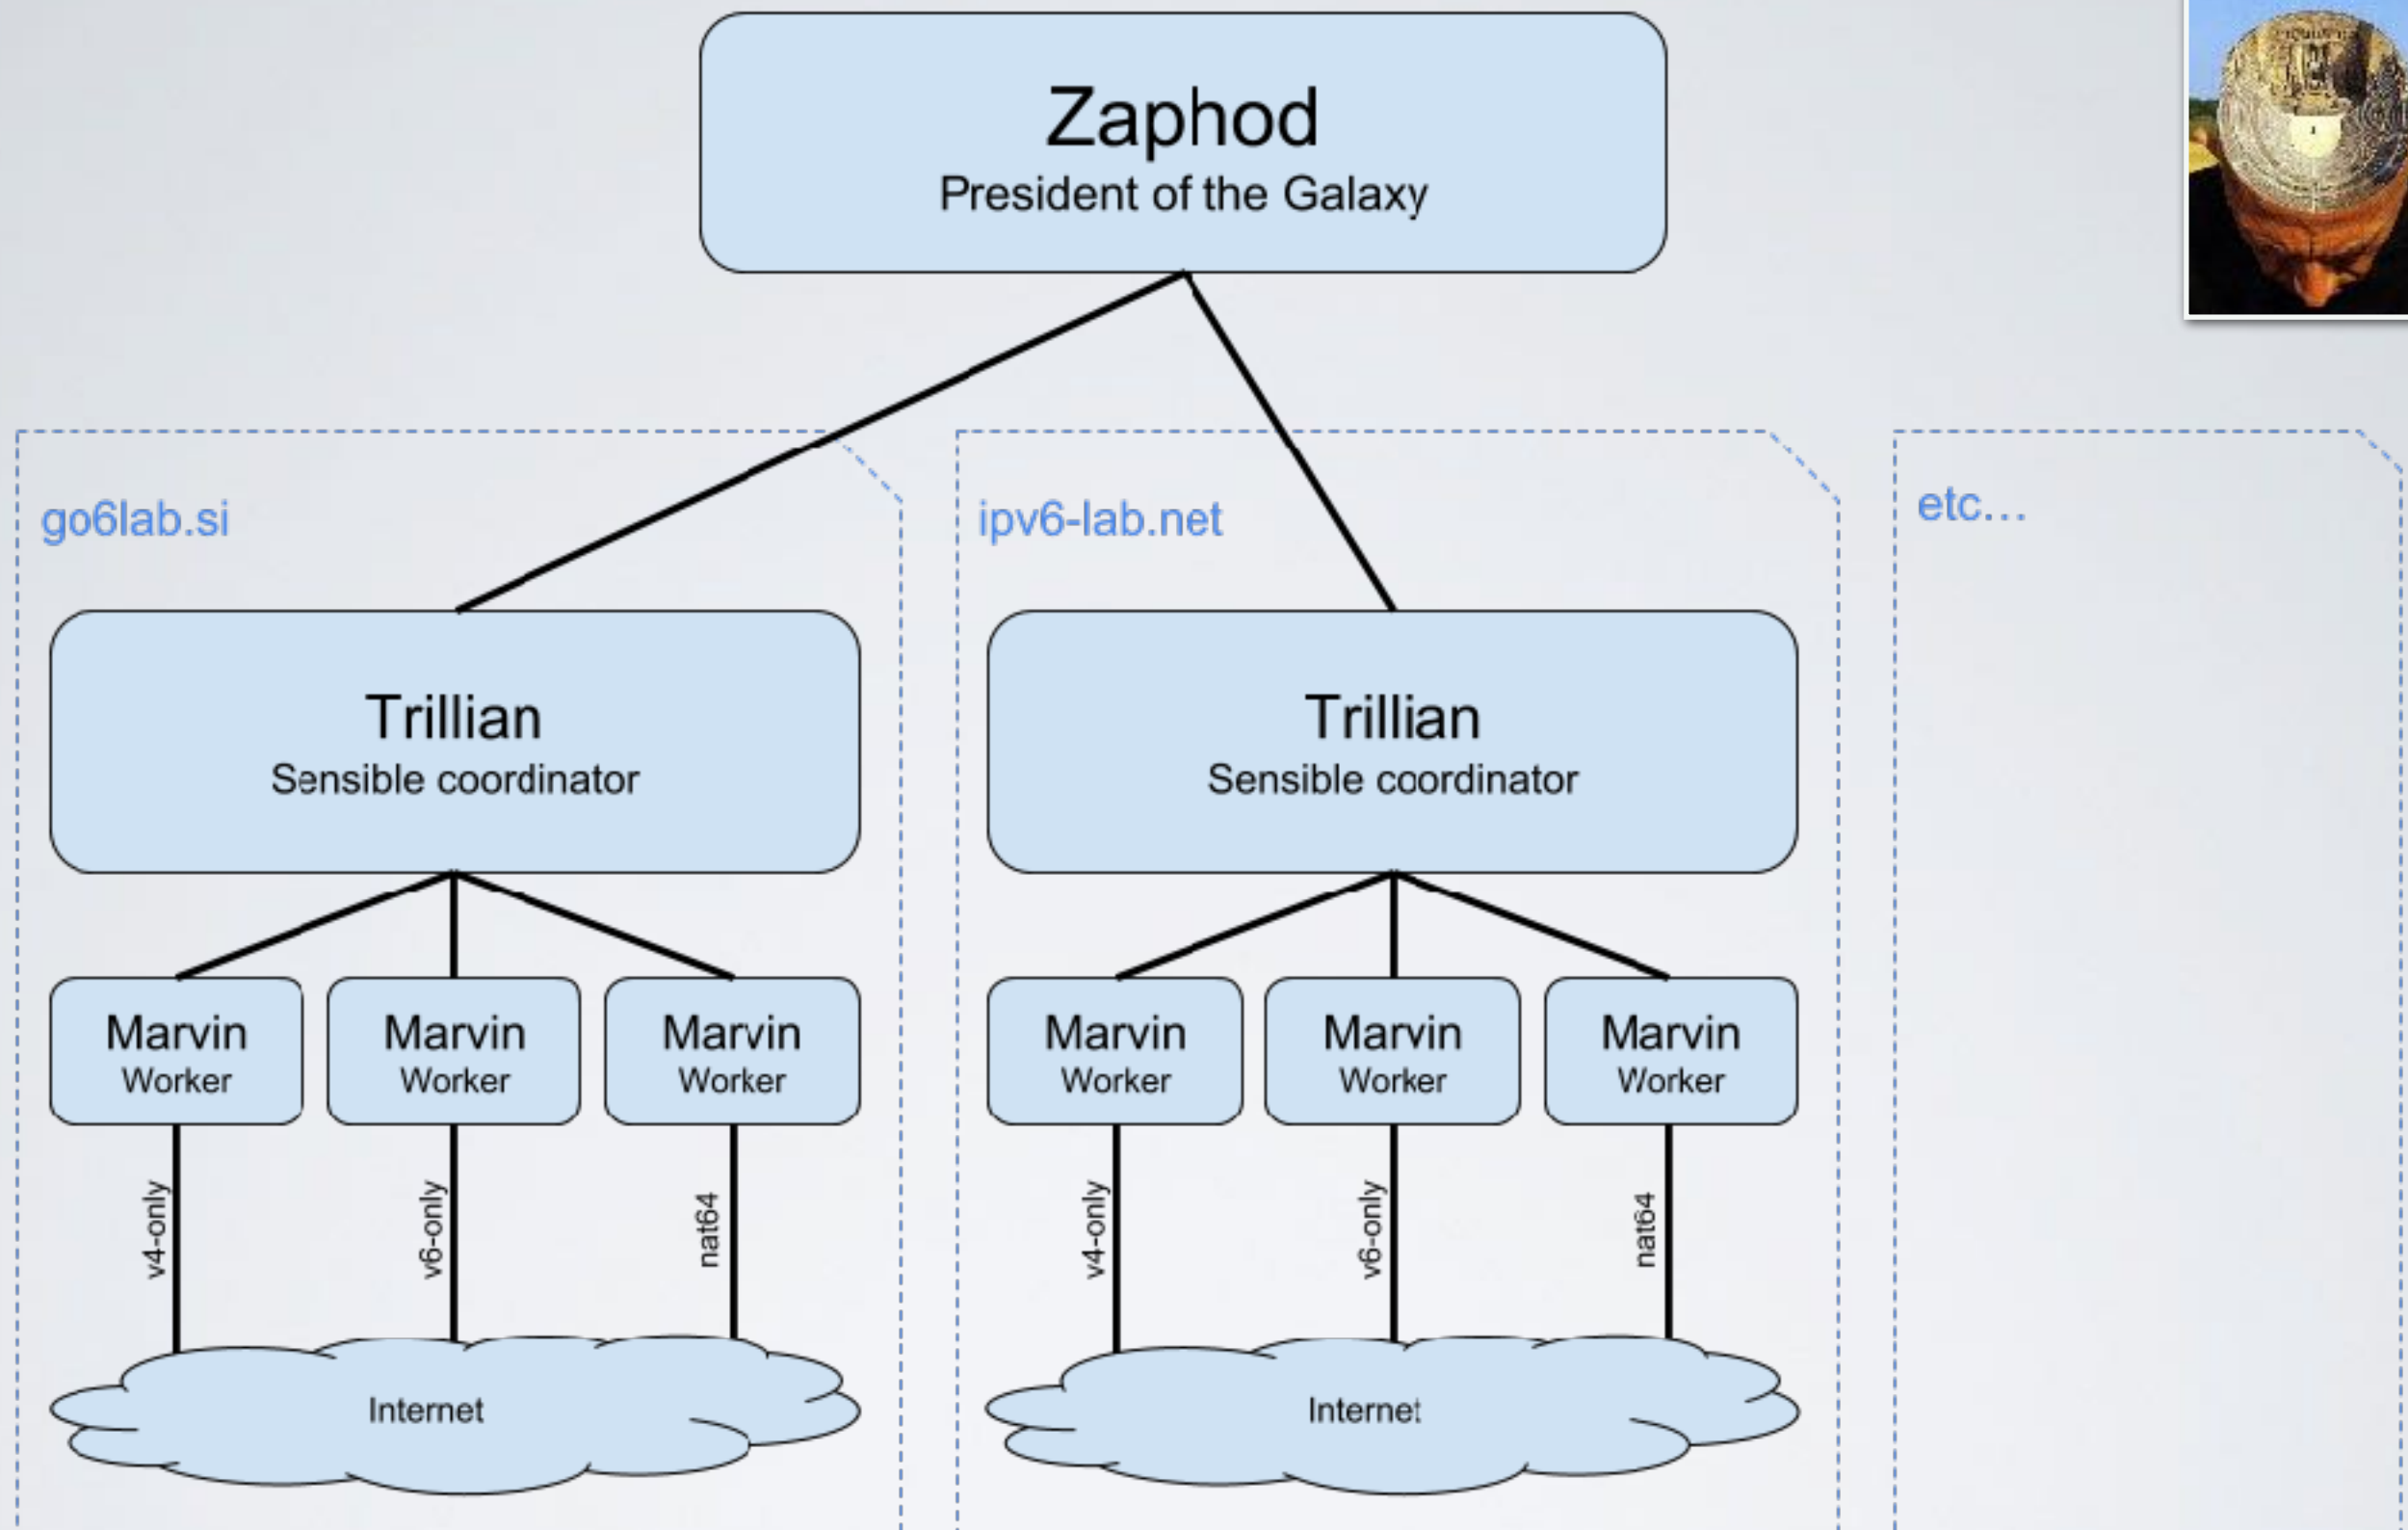

- Unclear what the cause of a failure is
- Bad error detection
- Two different systems:
 - ipv6-lab.net in NL
 - go6lab.si in SI
- No coordination between them

VERSION 2

- Distributed system
 - Central web interface
 - Many test-locations possible
 - Easy to install if you want to run your own test-location
- Better error detection and feedback
- Extendability for different tests

Top questions

Why should I offer IPv6 to my customers?

This is the answer to why you should do this but I don't actually know what that answer would be.
